

BRIGHT MD

# COVID-19 Screener

Onboard in 2 days

## An Adaptive Online Tool to Instantly Assess Risk Level

Bright.md's free COVID-19 evaluation, screening, and escalation tool helps hospitals in the U.S. meet the demands of possible novel coronavirus (COVID-19) outbreaks in local communities across the nation.

In line with the Centers for Disease Control's (CDC) recommendations to leverage telehealth to mitigate the spread of the virus, the free, rapidly updated tool allows patients to get advice from home, 24 hours a day, steering them away from emergency departments or urgent care clinics unless the severity of their condition warrants in-person care.

## How the COVID-19 Screener Can Expedite Your Care Delivery Efforts

**Define Patient Expectations** - Available 24/7, the screening tool includes an adaptive, dynamic interview that asks patients about recent symptoms, health history, and community exposure to COVID-19.

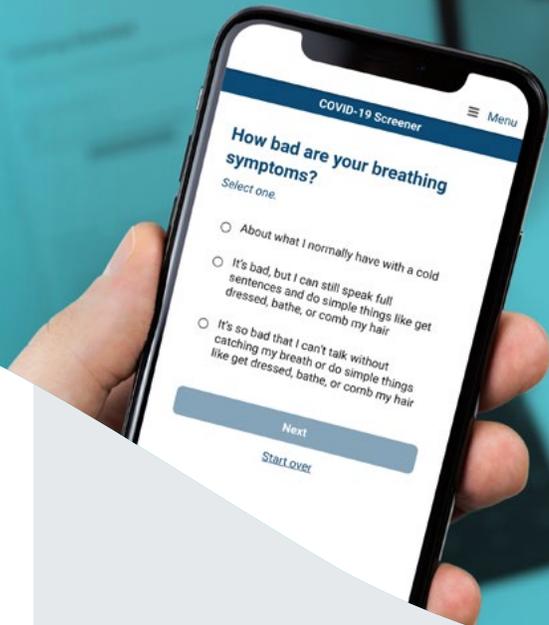

**Determine Risk Level** - When the interview is complete, the screening tool instantly informs the patient of their risk level for COVID-19 and gives clear, clinically appropriate next steps for care of their condition.

**Deliver Treatment** - Patients with a high risk of exposure are routed to their hospital's appropriate venue of care. Patients with a low-risk of exposure receive at-home care instructions and COVID-19 educational materials.

With the COVID-19 Screener, patients get trusted medical advice from the safety of home by answering fewer than 10 questions.

Hospitals and health care systems across the country are already using this screening tool to help reduce the volume of patient traffic to their facilities and the spread of COVID-19.

Our rapid-response team is constantly monitoring CDC guidelines and can have an up-to-date screening tool running on your website in days.

## Limit "worried well" patients in your ER and urgent care clinics

Patients Already Screened

200,000+

High-risk Patients Escalated
