

Complete Interoperability

A single patient visit, a complete picture of care

Whether your organization operates on a Cerner or Epic platform—or a system built in-house—it's important that your telehealth solution flows into and out of the EHR seamlessly.

Deep interoperability sets Bright.md apart. It lets providers offer clinically excellent care more efficiently, allowing you to maximize your patient volume and revenue.

Experience a smooth integration with any EHR system, including:

Why integrate Bright.md with your EHR? Streamline your care delivery process, together.

Automate 90% of clinician busywork to help your doctors deliver the high-quality mobile-friendly care your patients expect.

Enhanced Patient Interview

Key patient demographic information and medical history are automatically pulled into the adaptive AI-powered Bright.md medical interview.

Advanced Decision Making

Turn your clinicians into content reviewers, not creators. Communications between Bright.md and your EHR lets providers more quickly make informed decisions and lessen the administrative burden to deliver care.

Improved Care Delivery

Providers can quickly diagnose and treat patients while the chart-ready SOAP note, clinical data, interview documentation, and charge is sent back to the EHR.

Easily access Bright.md in Epic's App Orchard

Improve your care-delivery process with our native Epic integration.

Deliver Prescriptions to Patients, When They Need Them

Prescribe and administer prescriptions directly from Bright.md for nearly 500 low-acuity conditions. Patients immediately receive a notification with a map directing them to the nearest pharmacy for pick-up based on their preferences. We integrate with the leading electronic prescription companies to ensure patients are covered within their network of choice.
